HOW TO CALCULATE DELIVERY PRICE

- Find the destination in the "Zones" section and determine its zone.
- Select the required service.
- Calculate the weight of the shipment using calculation instruction to calculate the invoiced weight.
- The shipping price can be found in your ratecard based on the zone and the calculated weight in kgs.
- If you wish to calculate the rate for the import shipment, just add the Import surcharge of 10 % from the shipment's value to the delivery price.

CALCULATION OF THE INVOICED WEIGHT

Our charges are calculated on the basis of the customer declared or actual weight/dimensions. The volumetric (or dimensional) weight in kilograms is used to calculate charges only if it exceeds the declared or actual weight. The total weight is always rounded up to a kg.

Volumetric weight in kg = (length x width x height) in cm / 5,000

Volumetric weight does not apply to shipments in FedEx packaging materials, but if a FedEx Pak in Europe exceeds 0.0154 m³, volumetric weight may be applied. It is also true that if the shipment in the FedEx Pak package exceeds the weight of 2.5 kg, it will automatically be charged at the prices for the FedEx International Priority service.

The following minimum billable weight applies to FedEx Box and FedEx Tube packaging material:

- FedEx Box (all dimensions): 1 kg
- FedEx Tube: 4 kg

The maximum package sizes are defined in the service description. Please see our Service Guide on fedex.com for exact information on maximum dimensions. Any FedEx package that exceeds these standard dimensions is automatically considered FedEx International Priority® Freight or FedEx International Economy® Freight and charged accordingly.

For FedEx International Priority Freight and FedEx International Economy Freight services, the minimum billed weight is 68 kg.
