

Solution Overview

Lanham E-Ship, a shipping manifest software solution and Microsoft-certified app for Microsoft® 365 Business Central, offers a seamlessly simple way for businesses to reduce cost while increasing both efficiency and accuracy from the time of sales order through shipment.

As a Business Central extension, E-Ship offers FedEx in a consistent BC user interface, storing your shipping data inside your business system where it is easily accessed without cumbersome interfaces or new systems to learn. Shipment planning and execution are provided during sales entry right in your ERP system. E-Ship's quick scanning commands and packing capabilities distinguish it with speed and accuracy for high volume shipping, automatically generating BOLs or EDI ASNs. Detailed information in E-Ship may be accessed via the standard drill-down or reporting capabilities found in BC. Customer info, including addresses, are held centrally and are always available to all other areas of the system. There are no messy interfaces or awkward integrations with foreign user interfaces, or rekeying efforts required to ship via FedEx in E-Ship.

LANHAM ASSOCIATES®
Supply Chain Excellence
